EDUCATION

Texas State University

B.S. in Computer Science, Minor in Mathematics | GPA: 3.7

San Marcos, TX

Aug. 2023 – Dec. 2027

AWARDS & ACHIEVEMENTS

8+ Hackathon Wins: 1st Place at TXST Open Datathon 2025, Midnight Hackathon, HackHCC, QuackHacks, 2x Runner-up at Austin AI Community Hackathon

Academic Honors: Presidential Honors Scholarship (**\$120,000**), Dean's List, Honors College Student

EXPERIENCE

Software Engineering Intern – AI

Aug. 2026 – Present

Alive5

Austin, TX

- Building MCP servers and AI bot configuration in TypeScript/Node.js, targeting **70% faster onboarding**.
- Integrating n8n and custom AI skills via APIs and webhooks to extend automation across Alive5 workflows.
- Building embeddable React chatbots powered by Claude on AWS Bedrock for automated customer support.

Software Developer (Academic Client Project)

Jan. 2026 – May 2026

Texas State University – Clio POS System

San Marcos, TX

- Built a restaurant Point of Sale system with React, FastAPI, and SQLite in a **5-person Agile team**, supporting **4 core staff workflows**.
- Designed REST APIs for role-based access, table management, order processing, and staff queues.

Project Assistant

May 2024 – Sep. 2024

OXP - Texas State

San Marcos, TX

- Improved hardware reporting accuracy by **25%** across **\$2M+** in assets by building a SQL inventory database.
- Automated provisioning for **100+ remote devices** with Python and PowerShell, replacing manual setup.
- Automated website audits with Python, identifying and fixing **100+ broken department links**.

PROJECTS

Agent Studio – AI Audio Editing Agent [\[link\]](#) | *Python, TypeScript, Gemini, MCP, FFmpeg*

- Won **1st Place at QuackHacks** by building an AI audio workstation that converts natural-language edits into non-destructive workflows across **12 core audio capabilities**.

Hermes Agent – Always-On Personal AI [\[link\]](#) | *Python, LLM APIs, Tool Calling, Linux*

- Deployed an **always-on personal AI agent** on Linux laptop for email, article discovery, job prospecting, and coursework automation; cut tool-schema tokens by **~80%** via lazy discovery for token-constrained LLM routing.

Lit – Local Git Clone [\[link\]](#) | *Java, Gradle, JUnit, SHA-1*

- Built a Git-inspired version control system from scratch with SHA-1 content addressing and **10 core CLI commands** for commits, branches, diffs, and merges.

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, Go, C++, SQL, Bash, PowerShell

AI Frameworks & Platforms: LangChain, MCP, OpenAI/Claude Agents SDK, n8n, OpenAI, Anthropic Claude, Google Gemini/Vertex AI, AWS Bedrock, Hugging Face, Ollama

Backend & Web: FastAPI, Flask, Node.js, Spring Boot, React, Next.js, REST APIs, GraphQL, gRPC, WebSockets, microservices, event-driven systems, webhooks, SQL

Cloud, DevOps & Quality: AWS, GCP, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, Git, Linux, JUnit, Playwright, Postman, Prometheus, Grafana, Sentry
